Assignment: Semantic Recipe Page

Week: 2	**Due:** Sunday, Sept 8, 2026 by 11:59pm
Points: 2 points	**Submit:** One HTML file (Canvas)

Assignment Overview

Build a single-page recipe website using semantic HTML5. This assignment practices what we covered in Week 2: document structure, semantic elements, headings, text, lists, and links. No CSS yet, and no images yet, we add those later.

What to Build

Pick any recipe you like: a favorite dish, a family recipe, or one from a cookbook or website (credit the source). It must have at least 5 ingredients and 5 steps.

Your page must include

- **Valid HTML5 structure:** `<!DOCTYPE html>`, `<html lang="en">`, `<head>`, `<body>`, `<meta charset="UTF-8">`, and a `<title>`
- **At least 5 semantic elements:** `<header>`, `<main>`, `<article>`, `<section>`, `<footer>`, `<nav>`, `<aside>`
- **One <h1> only** (the recipe name), then `<h2>` for Ingredients and Instructions. Never skip heading levels
- **An unordered list** (`<ul>`) for ingredients
- **An ordered list** (`<ol>`) for the cooking steps
- **Paragraphs** (`<p>`) with a short intro, plus `<strong>` or `<em>` used at least once
- **At least one link** (`<a>`) to your source or a related recipe, with descriptive link text (not "click here")

What to Submit

One HTML file named **`LastName_Recipe.html`** (example: Kraishan_Recipe.html)

Upload it to Canvas before the deadline. No ZIP needed, there are no images in this one.

Grading (2 points)

Criteria	Points	What I'm Looking For
HTML Structure	**0.5**	Correct DOCTYPE, lang, charset, title, and head/body setup. All tags closed properly.
Semantic Elements	**0.6**	At least 5 semantic HTML5 elements, used for the right purpose (not just `<div>` everywhere).
Content & Lists	**0.6**	One h1, correct h2 sections, a `<ul>` for ingredients, an `<ol>` for steps, paragraphs, and a working link.
Code Quality	**0.3**	Clean indentation, readable structure, and passes validator.w3.org with no errors.

Tips & Common Mistakes

- Test in your browser as you go, do not write the whole page and then look at it.
- Run your file through validator.w3.org before submitting, it catches most point losses.
- Only one `<h1>` per page. Multiple h1 tags is the most common mistake on this assignment.
- Semantic elements should describe meaning, not appearance. `<section>` is not a styling box.
- Indent nested elements. If I cannot read it easily, neither can you next week.
