

Rich Content & Media

1- Add images properly with accessibility

2- Embed videos and audio

3- Create basic tables

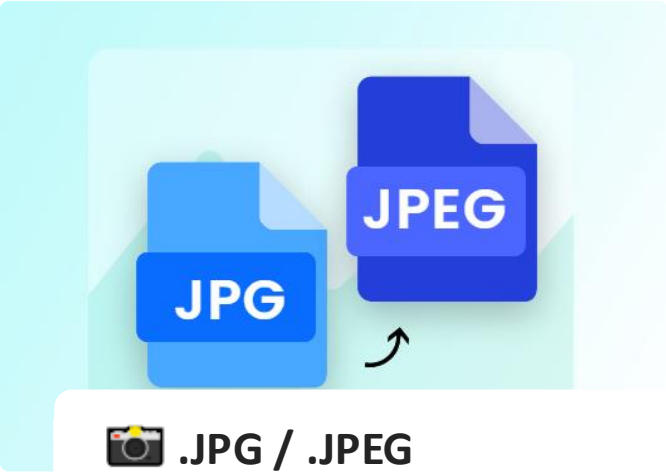

4- Understand form elements

Let’s make things visual!

SCROLL

Images Formats

Common Image Formats:

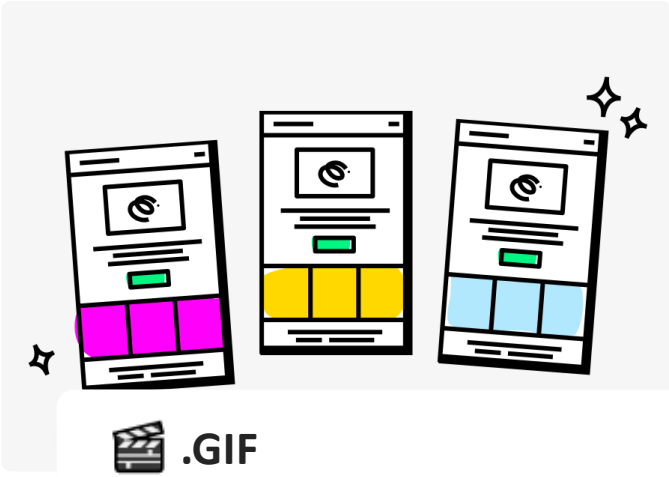

.JPG / .JPEG

- Best for: Photos, landscapes, complex images
- Pros: Small file size
- Cons: No transparency
- Example: profile-photo.jpg

.PNG

- Best for: Logos, icons, graphics with text
- Pros: Supports transparency, high quality
- Cons: Larger file size
- Example: company-logo.png

.GIF

- Best for: Simple animations
- Pros: Small file size, animated
- Cons: Limited colors
- Example: loading-spinner.gif

Image Size Matters

❌ **Common Mistakes:**

- Uploading 5MB photos straight from camera
- Using 4000×3000 pixel images
- Not compressing files

✅ **Best Practices:**

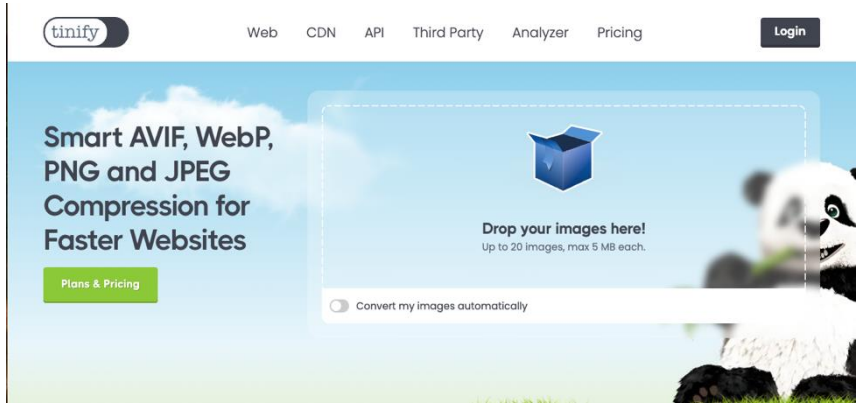

- Resize before uploading
- Maximum width: 1200-1600px for full-width images
- Compress images to reduce file size
- Target: Under 200KB per image

Why it matters?

Large images = slow website = frustrated visitors!

Free Tools to Resize/Compress:

tinypng.com

squoosh.app

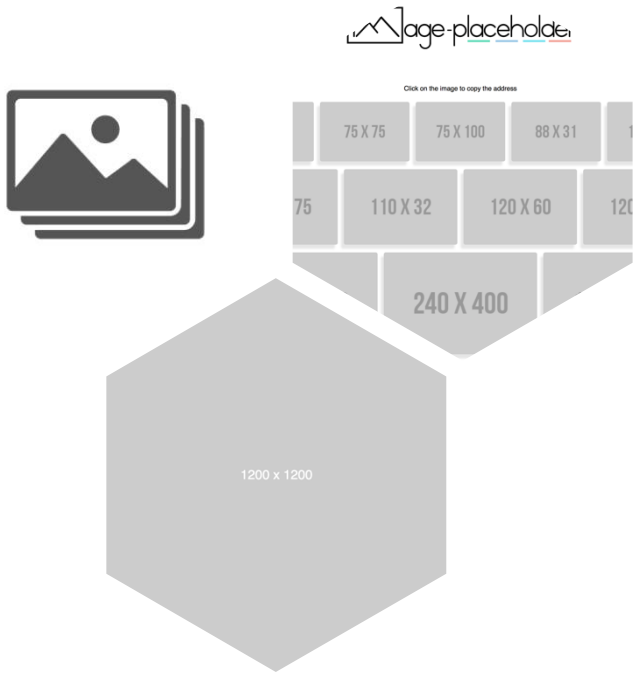

Finding Images Legally

Where to Get Images (Legally!):

Free Stock Photos (No Credit Needed):
- Unsplash.com
- Pexels.com
- Pixabay.com

For Testing Only:
- picsum.photos
- placeholder.com
- placeholderimage.dev

⚠ **DON'T:**
- Google Images and just download
- Screenshot from other websites
- Use images without checking license

Safe Option: Use your own photos! Take pictures with your phone.

Images The Right Way

```
<img src="photo.jpg" alt="Description of image">
```

Two required attributes:

- `src` = source (where the image is)
- `alt` = alternative text (description)

Both are REQUIRED for good web design!

Images without alt text fail accessibility. This is non-negotiable.

The SRC Attribute

Three Ways to Specify Image Source:

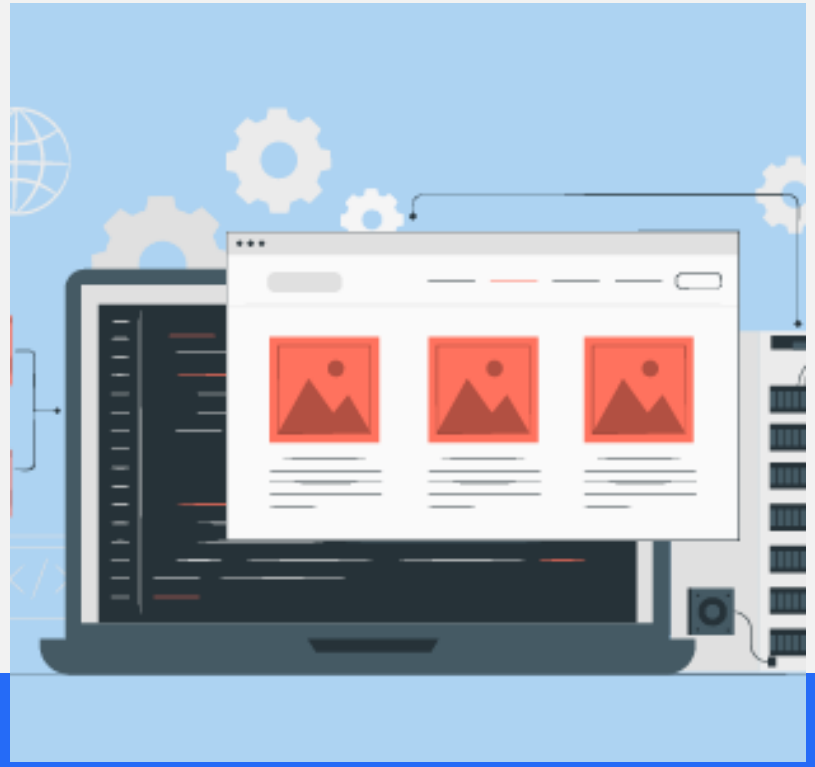

```
<!-- Same folder: -->
<img src="photo.jpg" alt="...">
```

```
<!-- Subfolder: -->
<img src="images/photo.jpg" alt="...">
```

```
<!-- From the web: -->
<img src="https://example.com/photo.jpg" alt="...">
```

⚠ **Common Mistakes:**

```
<!-- Wrong case: -->
<img src="Images/photo.jpg">  ← Folder is actually "images"
<!-- Wrong extension: -->
<img src="photo.JPG">  ← File is actually "photo.jpg"
<!-- Typo in path: -->
<img src="image/photo.jpg">  ← Folder is "images" with 's'
```

Paths are case-sensitive on web servers!

ALT Text — SUPER Important

Why ALT Text Matters:

- Screen readers read it aloud (accessibility!)
- Shows if image fails to load
- Helps search engines understand images
- Required by law in many countries

Alt Text Pro Tips:

- Length: Keep under 125 characters (screen reader sweet spot)
- Don't say: "image of" or "picture of" Screen readers already announce "image"

Be descriptive!

```
<!-- Logo -->
<img src="logo.png" alt="Company Name Logo">

<!-- Button image -->
<img src="submit-btn.png" alt="Submit form">

<!-- Link image -->
<a href="gallery.html">
    <img src="gallery-icon.png" alt="View photo gallery">
</a>
```

Alt text is about accessibility
Describe what's in the image

File Organization

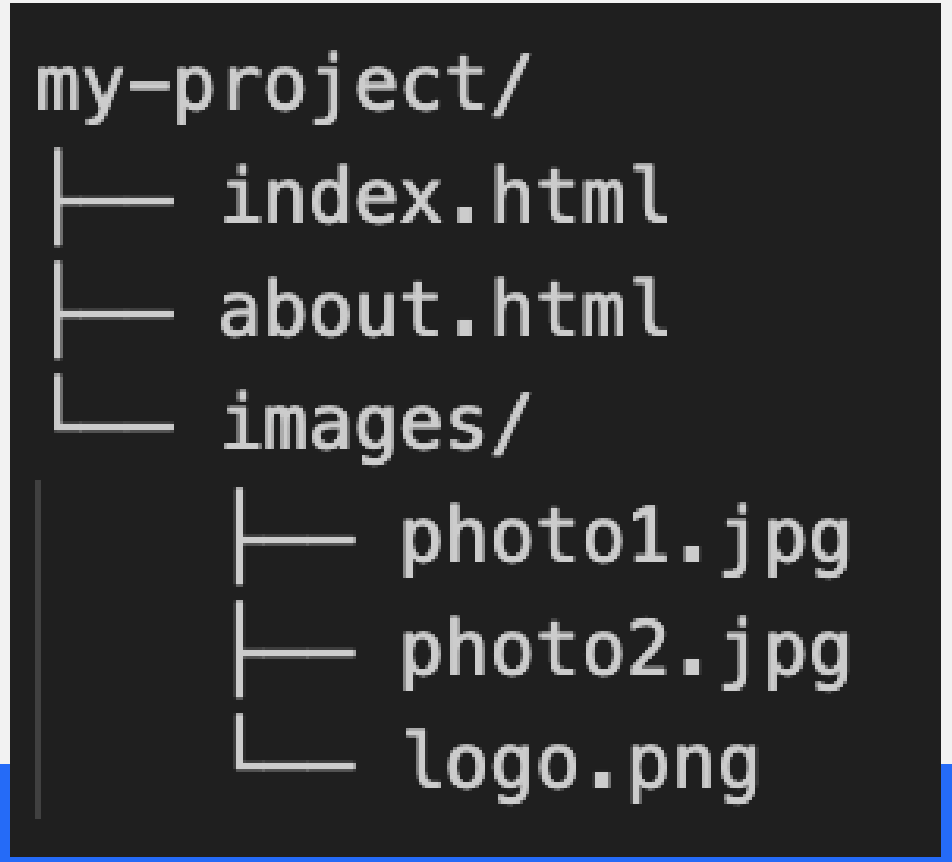

Rules:

- Descriptive names (not camera defaults)
- Lowercase letters
- Hyphens instead of spaces
- No special characters

File Naming Best Practices:

Good names:
- hero-banner.jpg
- team-photo-2024.png
- company-logo.png

Bad names:
- IMG_1234.jpg
- DSC00594.jpg
- image (1).png

Professional tip:
Always use an images folder!

The Figure Element

Basic way:

```
<img src="dog.jpg" alt="A happy dog">
<p>My dog Charlie</p>
```

Semantic way:

```
<figure>
    <img src="dog.jpg" alt="A happy dog wearing a party hat">
    <figcaption>My dog Charlie on his birthday</figcaption>
</figure>
```

Figure groups image with caption semantically.
Better for accessibility and styling.

Why Use Figure Element?

1. Groups image with its caption semantically
2. Shows they're related content
3. Easier to style later with CSS
4. Better accessibility
5. More professional code

Use it when images have captions!

Embedding Video

Two Ways to Add Video:

Embed from YouTube/Vimeo (EASIEST!):

1. Go to video → Share → Embed
2. Copy the <iframe> code
3. Paste into your HTML
4. Includes captions/accessibility features

Host your own video:

- Use the <video> tag
- Requires video file
- You handle accessibility

Always include captions/subtitles for deaf or hard-of-hearing users. YouTube auto-generates these!

YouTube Embed Example

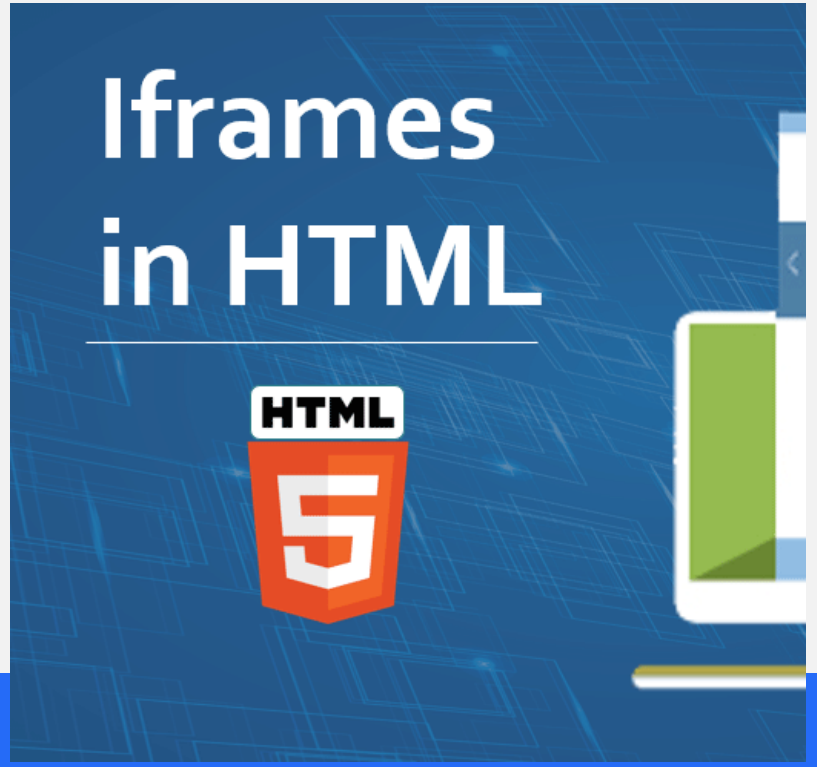

```
<iframe width="560" height="315"
    src="https://www.youtube.com/embed/VIDEO_ID"
    title="Video description"
    allowfullscreen>
</iframe>
```

How to get this:

1. Go to YouTube video
2. Click "Share"
3. Click "Embed"
4. Copy the code!

Important Notes:

- `title="..."` describes the video for screen readers
- This code has fixed dimensions (won't resize on mobile)
- We'll learn responsive video techniques later!

We'll learn CSS techniques to make videos responsive in a few weeks

HTML5 Video Element

Hosting Your Own Video:

```
<video controls width="500" poster="thumbnail.jpg">
    <source src="my-video.mp4" type="video/mp4">
    <source src="my-video.webm" type="video/webm">
    Your browser doesn't support video.
</video>
```

Key Attributes:

- `controls` = Show play/pause buttons
- `poster` = Thumbnail image before video plays
- `width` = Video width in pixels
- Multiple `<source>` tags = Browser picks first format it supports

Optional: `autoplay muted loop`

⚠ **Warning:** `autoplay` only works if video is `muted` (browsers block autoplaying sound)

The poster attribute shows a preview image before the video loads.

What Else Uses <iframe>

All of these work with simple `<iframe>` code:

- Spotify playlists & podcasts
- Google Maps
- Twitch streams
- Vimeo videos
- SoundCloud tracks

Process is identical:

1. Find the content
2. Click "Share" or "Embed"
3. Copy the `<iframe>` code
4. Paste into your HTML

What's More Complex (We'll cover later):

- Instagram, Twitter/X, Facebook posts
- *These use fancier code with JavaScript*
- *Still copy-paste, just messier!*

Some platforms (Instagram, Twitter) use more complex code. We'll tackle those later!

Embedding Audio

Two Ways to Add Audio:

Embed from Platforms (EASIEST!):

1. Spotify tracks/playlists/podcasts
2. SoundCloud tracks
3. Apple Podcasts
4. Same process: Share → Embed → Copy code

Host your own audio:

- Use the <audio> tag
- Good for: interviews, sound effects, custom audio

Common Uses in Journalism:

- Audio stories & documentaries
- Podcast episodes
- Interview clips
- Ambient sound

Always include captions/subtitles for deaf or hard-of-hearing users. YouTube auto-generates these!

Audio Element

Embed from Platforms:

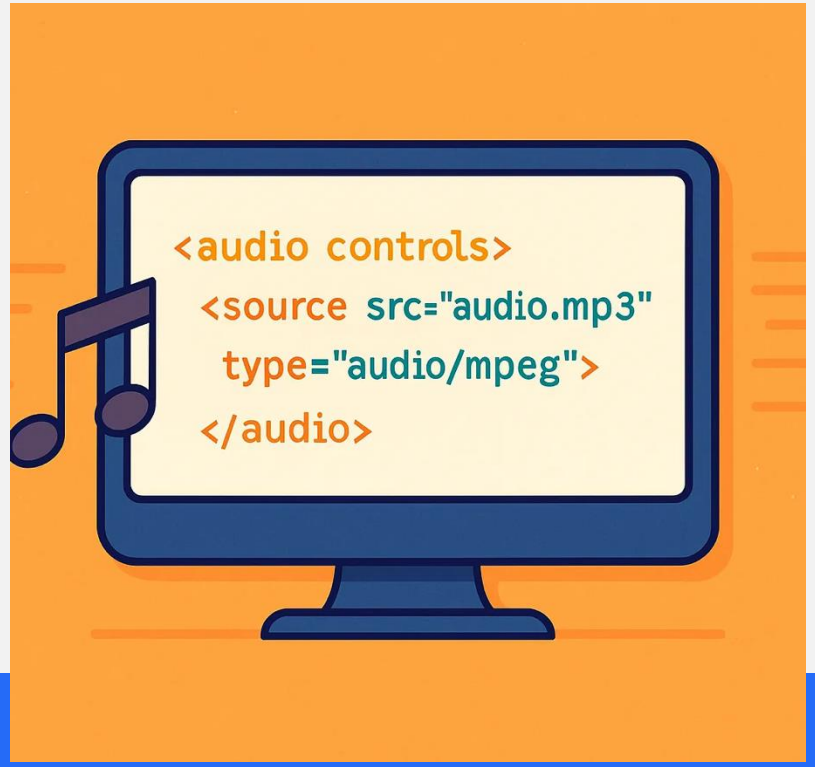

```
<!-- Spotify, SoundCloud, etc. -->
<iframe src="spotify-embed-url"...></iframe>
```

Host Your Own:

```
<audio controls>
    <source src="audio.mp3" type="audio/mpeg">
    <source src="audio.ogg" type="audio/ogg">
    Your browser doesn't support audio.
</audio>
```

Attributes: `controls, loop, autoplay muted`

- Journalism Use Cases: Podcasts, interviews, audio stories, ambient sound
- Accessibility: Always provide transcripts for content audio!

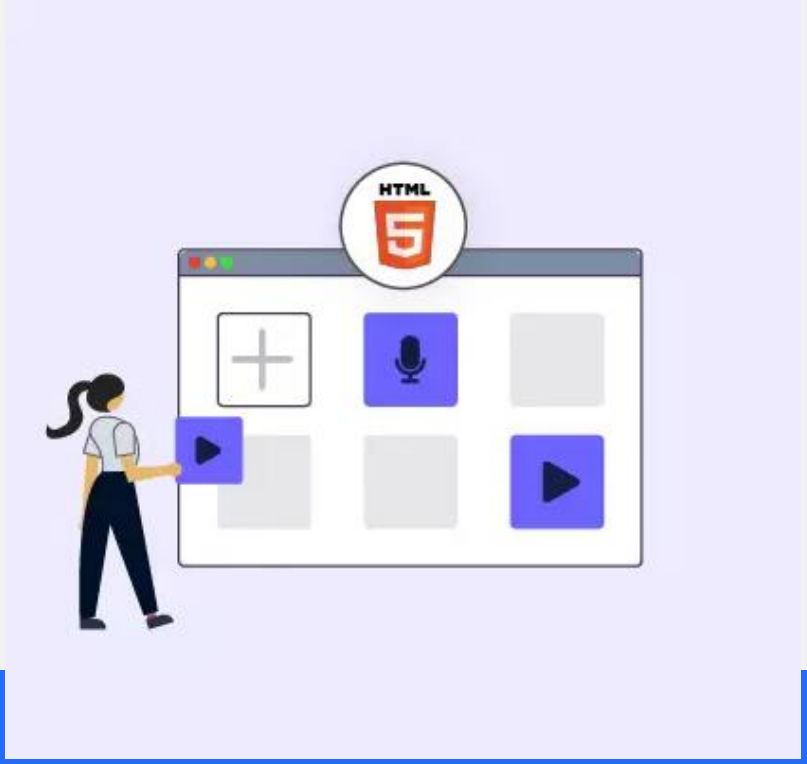

We'll learn CSS techniques to make videos responsive in a few weeks

HTML5 Audio Element

Hosting Your Own Audio:

```
<audio controls>
    <source src="audio.mp3" type="audio/mpeg">
    <source src="audio.ogg" type="audio/ogg">
    Your browser doesn't support audio.
</audio>
```

Key Attributes:

- `controls` = Show play/pause/volume controls
- `loop` = Repeat audio (good for background music)
- `autoplay muted` = Autoplay only works muted
- Multiple `<source>` tags = Browser compatibility

File Formats:

- **MP3** = Most common, works everywhere
- **OGG** = Open format, smaller files
- **WAV** = High quality, huge files

Accessibility: Provide transcripts for important audio content!

Organizing Video & Audio Files

Rules:

- Descriptive names
- Lowercase letters
- Hyphens instead of spaces
- No special characters

File Naming Best Practices:

Good names:

- interview-clip.mp4
- background-music.mp3

Bad names:

- VID_5678.mp4
- audio_final_FINAL.mp3

Free Media Resources for Your Projects

Important:

- These are free for projects
- Some require attribution (credit the creator)
- Check each site's license

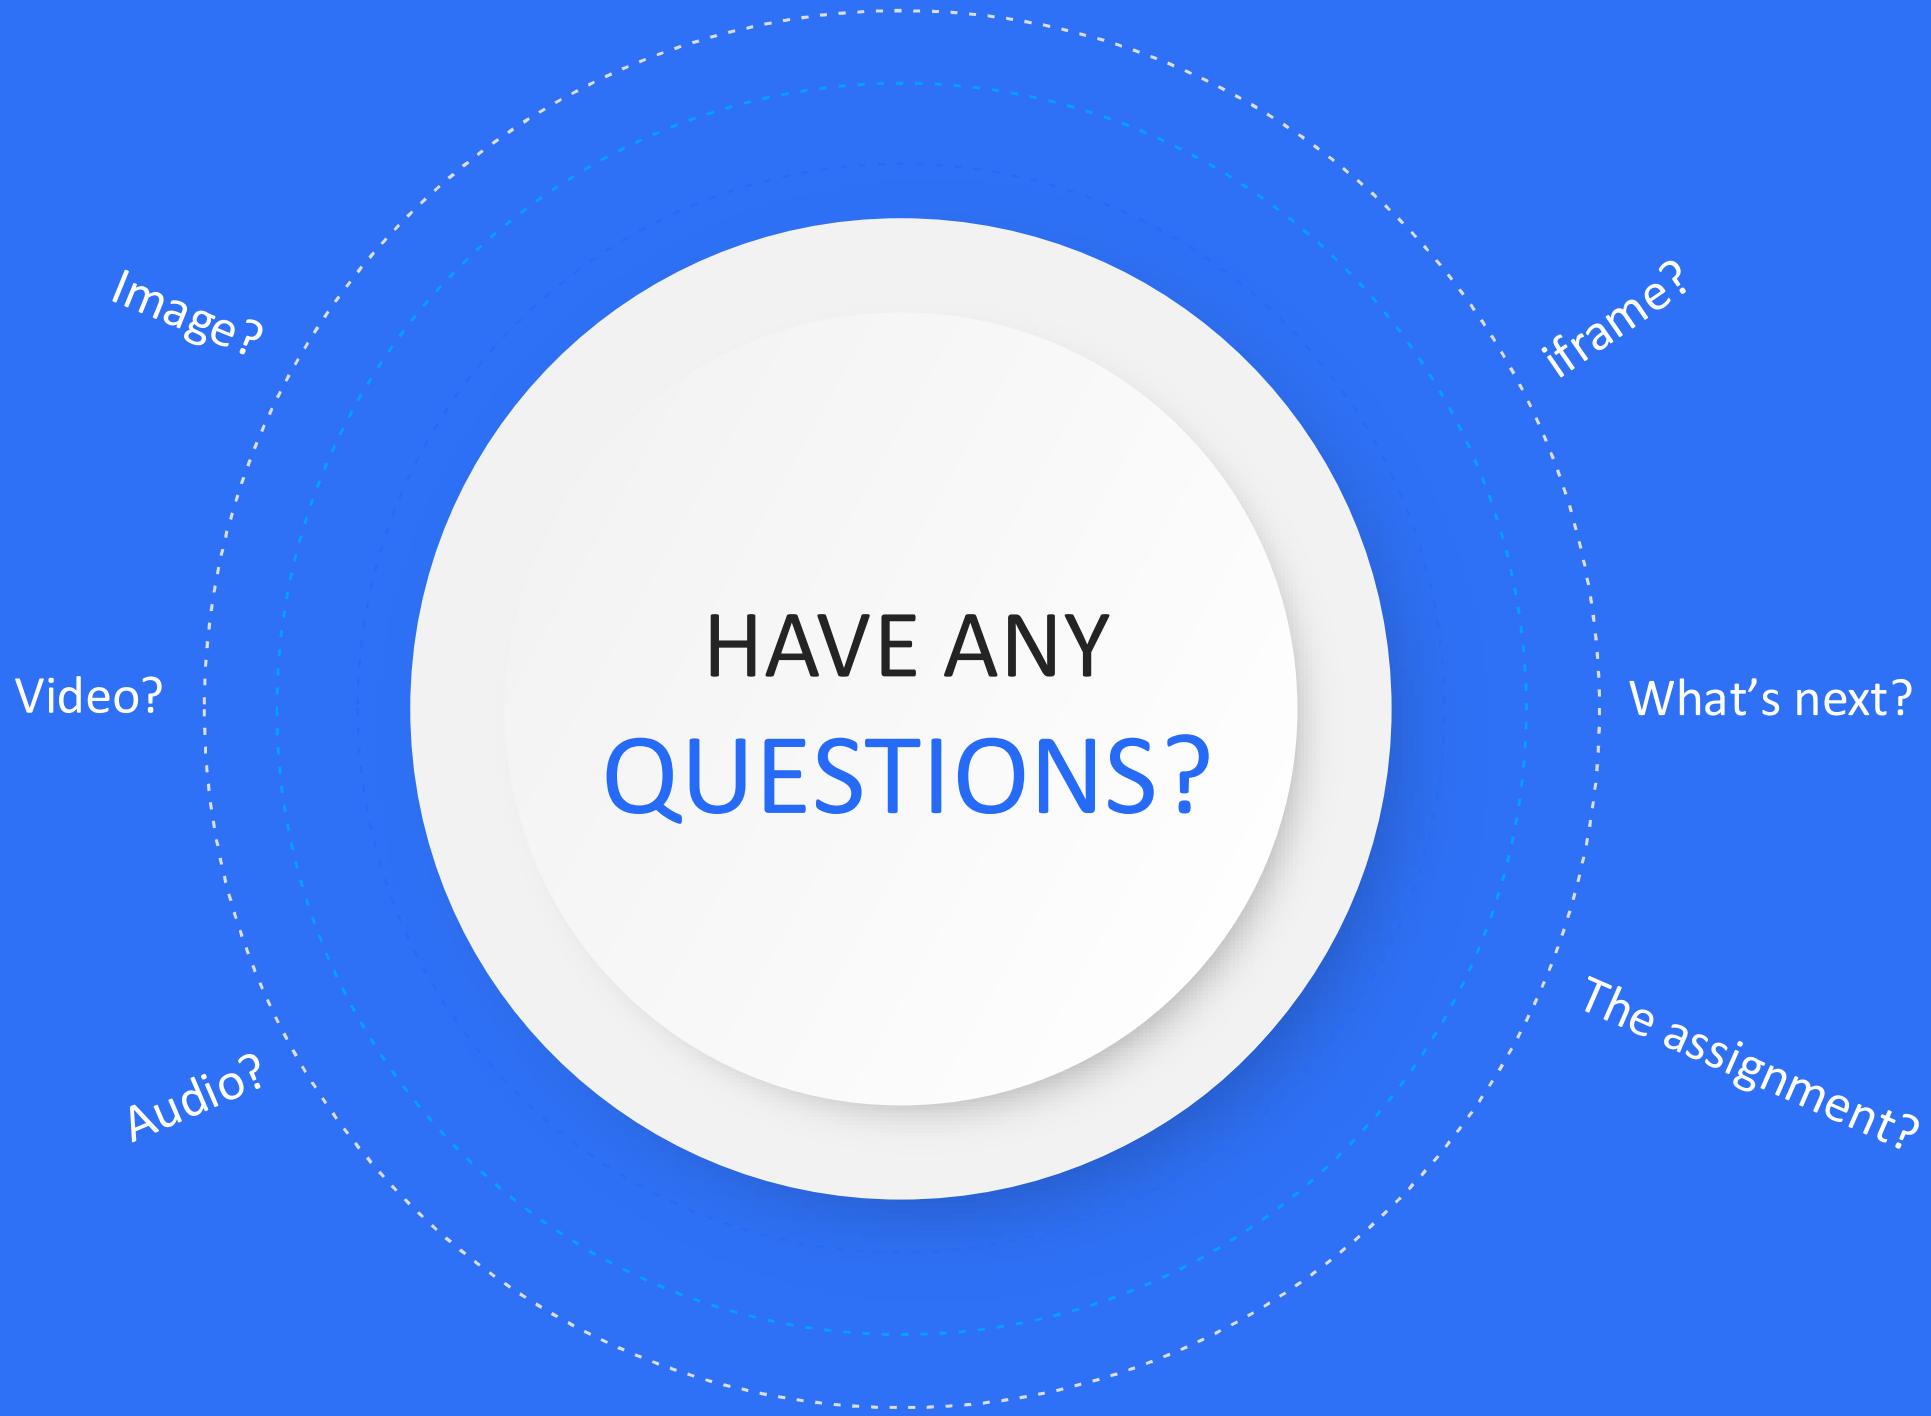

Where to Find FREE Videos & Audio

Free Stock Videos:

- **Pexels Video** - pexels.com/videos
- **Pixabay** - pixabay.com/videos
- **Coverr** - coverr.co
- **Videvo** - videvo.net

Free Music & Audio:

- **Pixabay** - pixabay.com/music (also has sound effects!)
- **Incompetech** - incompetech.com (royalty-free music)
- **Free Music Archive** - freemusicarchive.org
- **YouTube Audio Library** - (in YouTube Studio)
- **Freesound** - freesound.org (sound effects)
