Assignment: Multi-Page Mini Site

Week: 4	**Due:** Sunday, Sept 20, 2026 by 11:59pm
Points: 2 points	**Submit:** ZIP file (3 pages + images)

Assignment Overview

Build a small three-page website that is properly linked together, with a data table and a working contact form. This is your last HTML-only assignment, everything you have learned so far comes together here. We start CSS next week.

What to Build

Pick any subject you want a small site about: a club or organization, a local business, a band, a team, an event, or a personal site. Real or fictional is fine.

Your site must include

- **Three linked pages:** index.html (home), one content page of your choice, and contact.html
- **A `<nav>` on every page** with the same links, so a visitor can reach any page from any page
- **One data table** with a `<caption>`, `<thead>` and `<tbody>`, and `<th>` headers using the scope attribute (a schedule, roster, price list, or stats)
- **A contact form** with at least four fields: text, email, a `<textarea>`, and one `<select>`, radio, or checkbox, plus a submit button
- **A `<label>` for every input,** with its for attribute matching the input id
- **Semantic structure on all pages:** `<header>`, `<nav>`, `<main>`, `<footer>`, one `<h1>` per page
- **At least one image** with descriptive alt text, in an images/ folder

What to Submit

A ZIP file named **`LastName_MiniSite.zip`** (example: Kraishan_MiniSite.zip)

All three .html files at the top level, plus your images/ folder. Unzip it somewhere else and click through every nav link before you submit.

Grading (2 points)

Criteria	Points	What I'm Looking For
Pages & Navigation	**0.6**	Three real pages, a consistent nav on each, and relative links that all work from the ZIP.
Contact Form	**0.6**	Four or more fields of different types, a submit button, and a `<label>` correctly tied to every input.
Data Table	**0.4**	A `<caption>`, `<thead>`/`<tbody>`, and `<th>` headers with scope. Real content, not filler.
Semantics & Code Quality	**0.4**	Correct semantic structure, one h1 per page, alt text, clean indentation, no validator errors.

Tips & Common Mistakes

- Your form will not actually send anything, there is no server behind it yet. That is expected and costs no points.
- Every input needs a `<label>` whose for matches that input id. This is the #1 point loss.
- Use the right input types: type="email", type="tel". They give free validation and better mobile keyboards.
- Build one page fully, then copy it for the other two and change the content. Keep the nav identical.
- Click every link on every page after unzipping. Broken nav links are easy points to lose.
