Assignment: Typography Showcase Page

Week: 5	**Due:** Sunday, Sept 27, 2026 by 11:59pm
Points: 2 points	**Submit:** ZIP file (HTML + CSS)

Assignment Overview

Your first CSS assignment. Build a single page that shows off a typography system you designed: headings, body text, and small text that clearly belong together. The goal is readable, deliberate type, not decoration.

What to Build

A type specimen page for a real or fictional brand, magazine, or your own name. It needs enough real text to judge readability: a headline, a subhead, at least three paragraphs, a pull quote, and a caption.

Your page must include

- **An external stylesheet** named styles.css, linked with `<link>` in the `<head>`. No inline style attributes and no `<style>` block
- **Two Google Fonts maximum,** one for headings and one for body text, loaded correctly in the `<head>`
- **A clear type scale:** `<h1>`, `<h2>`, `<h3>`, body text, and one smaller style for captions or credits, each visibly different in size and weight
- **Deliberate text settings:** line-height, letter-spacing, and font-weight set on purpose, not left at browser defaults
- **A palette of 3 to 4 colors** total, with body text that is easy to read against its background
- **Spacing from the box model:** margin and padding used to create rhythm, plus a max-width so your lines of text are not too long
- **Three kinds of selector:** element, class, and one descendant or grouped selector

What to Submit

A ZIP file named **`LastName_Typography.zip`** (example: Kraishan_Typography.zip)

Containing index.html and styles.css, plus an images/ folder only if you used images. Unzip it somewhere else and confirm your styles still load.

Grading (2 points)

Criteria	Points	What I'm Looking For
Typography System	**0.6**	Clear hierarchy across headings, body, and small text. Two fonts maximum, used consistently and for a reason.
CSS Setup & Selectors	**0.5**	A working external stylesheet, no inline styles, and element, class, and descendant or grouped selectors used correctly.
Spacing & Readability	**0.5**	Thoughtful margin and padding, comfortable line-height, and a max-width that keeps lines readable.
Color & Code Quality	**0.4**	A restrained palette with readable contrast, plus clean, organized, commented CSS.

Tips & Common Mistakes

- Link your CSS with `<link rel="stylesheet" href="styles.css">` inside `<head>`. If nothing changes on screen, that path is usually why.
- Two fonts is plenty. Three or more is the fastest way to make a page look amateur.
- Keep body text lines around 65 to 75 characters. Full-width paragraphs are hard to read.
- Set line-height near 1.5 for body text, and tighter for large headings.
- Spacing here should come from margin and padding. We cover layout tools next week.
